PROJECTS

Lego Collection Website | JavaScript, CSS, EJS

[GitHub](#)

- This website showcases various LEGO themes with detailed descriptions and collections, allowing users to explore different LEGO sets categorized under various themes.
- It provides a convenient resource for users to view set details, including photos, descriptions, and collection status, all within a responsive design.

Café Management Project | Python – MySQL connectivity

[GitHub](#)

- "KAFFYN - The Cafe: Python MySQL Connectivity for Cafe Management System" is a project aimed at implementing a robust cafe management system.
- It features secure authentication, a user-friendly customer interface for seamless ordering, and comprehensive manager functions including order and menu management, staff management, and financial reporting.
- The system enhances efficiency, accuracy, and flexibility in cafe operations.
- Implemented in Python with MySQL connectivity, it offers a command-line interface for ease of use, with future plans for GUI integration and additional features like inventory management and online ordering capabilities.

Netflix Clone Project | JavaScript, HTML and CSS

[GitHub](#)

- This is a responsive web application replicating the popular Netflix homepage layout.
- It showcases movie posters categorized by genres and allows users to click on posters to watch trailers.
- This project demonstrates front-end development skills with a focus on user interface design and interactivity.
- The project aims to provide a seamless and engaging user experience like the real Netflix platform.

WORK EXPERIENCE

Operation Associate, Dashmart (Doordash), Toronto

February 2024 – Present

- Picked and packed orders received through the app, **ensuring accuracy** and **timely delivery**.
- **Managed inventory** and **minimized spoilage** by organizing stock and monitoring shelf life.
- Collaborated with team members to ensure **customer satisfaction** through accurate order fulfillment and appropriate substitutions.
